

PRINTER CARTRIDGE AND METHOD OF MAKING OR REFURBISHING

Abstract of Disclosure

A printer cartridge and method of making or refurbishing a printer cartridge are disclosed. The printer cartridge may include a first cartridge subassembly attached to a second cartridge subassembly. The first cartridge subassembly may include a first conductive terminal and the second cartridge subassembly may include a second conductive terminal that is normally in electrical contact with the first conductive terminal when the first and second subassemblies are assembled. An external access may be provided to the first conductive terminal in the event the first conductive terminal is inaccessible after assembling the printer cartridge.
